Purpose

The purpose of this policy is to outline the responsible, ethical, and transparent use of Generative Artificial Intelligence (GenAI) at The Institute of International Studies (TIIS). While GenAI technologies offer significant potential to support teaching, research, administration, and professional practice, they also present challenges around integrity, bias, privacy, and security.

As a smaller agile institution, TIIS adopts a practical and proportionate approach, ensuring GenAI is used in ways that:

- Align with TIIS's strategic goals, academic values, and legal obligations.
- Remain subject to human oversight, with escalation to TIIS Management, Academic Board (AB), or Board of Directors (BoD) where appropriate.
- Mitigate ethical, legal, and academic risks without requiring continuous monitoring or specialist teams.
- Promote authentic learning and workforce readiness by embedding AI literacy and responsible use practices into teaching, research, and administration.

Scope

This policy applies to the entire TIIS community, including students, faculty, professional staff, contractors, and members of governance bodies. It governs the use of Generative Artificial Intelligence (GenAI) in coursework, teaching, research, administrative processes, policy and procedure development, and communications.

As a smaller, agile institution, TIIS does not operate large-scale enterprise AI systems. Instead, this policy applies to:

- Individual use (for example, in learning, teaching, or research projects).
- Institutional use (such as administrative tools or approved systems adopted by TIIS Management).

The policy is binding on all persons engaging with GenAI on behalf of TIIS. Where questions or risks arise, responsibility rests with the individual user, with escalation to TIIS Management, the Academic Board (AB), or the Board of Directors (BoD) as appropriate.

Applicability

This policy applies to all members of the TIIS community as outlined in the Scope. Its role here is to emphasise how the policy is applied in practice:

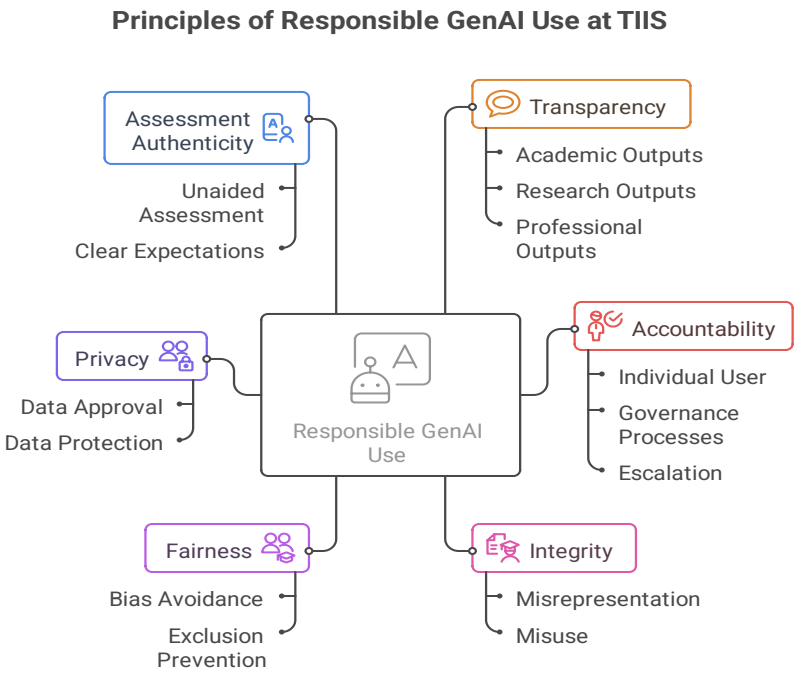

- It provides clear boundaries and expectations for each user group (students, staff, faculty, administrators, and contractors).
- It promotes a consistent approach to GenAI use across the institution, helping to minimise risks while supporting inclusive and equitable adoption.
- It is designed to be practical and accessible, recognising TIIS's scale and resources.

To assist with day-to-day application, TIIS offers short reference guides and disclosure examples for students, staff, researchers, and administrators. These materials are intended to clarify responsibilities and support responsible GenAI use without requiring extensive specialist oversight.

Principles

The following principles (Figure 1) underpin the responsible and effective use of Generative Artificial Intelligence (GenAI) at TIIS. They guide both planning and day-to-day practice, and are reflected in teaching, research, and administration.

Figure 1

- Transparency: All use of GenAI in academic, research, or professional outputs must be disclosed clearly.
- Accountability: Responsibility rests with the individual user. Oversight is provided through normal governance processes, with escalation to TIIS Management, the Academic Board (AB), or the Board of Directors (BoD) where required.
- Integrity: All GenAI use must uphold TIIS's academic and professional standards in line with the higher Education Standards Framework. Misrepresentation or misuse is considered misconduct.
- Fairness: GenAI use must support equitable student experiences and avoid bias or exclusion.
- Privacy: Personal and sensitive data must not be entered into GenAI systems unless explicitly approved by TIIS Management.
- Assessment Authenticity: Every subject must include at least one assessment task demonstrating unaided student skills, with course outlines providing clear expectations and safeguards.

Organisational Use

TIIS supports the responsible use of Generative Artificial Intelligence (GenAI) in administrative and organisational activities, enhancing efficiency, assist decision-making, and services improvement.

Organisational use must be:

- Aligned with TIIS goals and priorities, ensuring AI adoption supports teaching, research, and student experience.
- Reviewed by TIIS Management for ethical and privacy considerations before significant tools are introduced. Where needed, matters may be escalated to the Academic Board (AB) or the Board of Directors (BoD).
- Compliant with procurement standards, intellectual property, licensing, and copyright requirements.
- Overseen by TIIS Management, with accountability for ensuring systems are used appropriately.
- Monitored for fairness, especially where outcomes may affect students or staff.

Synthetic data may be used for training, simulation, or testing where real data is either sensitive or not available. Such data must be clearly identified, disclosed in outputs, and handled with the same ethical care as authentic data.

Administrative Efficiency and Student Support

TIIS may make use of Generative Artificial Intelligence (GenAI) technologies to improve efficiency and support services, provided that all use is practical, proportionate, and under human oversight.

Examples include:

- Improving administrative efficiency through simple automation and workflow streamlining.
- Enhancing communications within TIIS and with students, ensuring clarity and accessibility.
- Providing student support through AI-enabled tools such as chatbots for routine enquiries, or draft support for institutional documents.

In every case, human oversight remains essential, particularly where AI tools may affect students or staff directly. Decisions about adoption and use will be made by TIIS Management, with escalation to the Academic Board (AB) or Board of Directors (BoD) if needed.

Ethical and Privacy Assessments

Before significant Generative Artificial Intelligence (GenAI) tools are introduced at TIIS, their use must be reviewed for ethical and privacy risks.

Reviews should:

- Consider risks related to bias, fairness, transparency, data privacy, and potential misuse.
- Be conducted by TIIS Management, with escalation to the Academic Board (AB) or Board of Directors (BoD) where necessary.
- Document any mitigation strategies prior to implementation.

To support consistency, TIIS will provide a simple checklist (see Appendix C) to guide these reviews. The checklist is designed to be practical and usable without requiring specialist ethics or data governance units.

Accessibility and Usability

To make this policy practical and easy to apply, TIIS provides simple quick-reference materials for different user groups. These resources summarise responsibilities, give examples of appropriate GenAI use, and include templates for disclosure.

- Appendices E–H provide tailored guidance for students, staff, researchers, and administrators.
- Appendix B includes a decision flowchart to help students determine when GenAI use is permitted in their studies.

These supporting resources are designed to keep the policy accessible, consistent, and usable, without requiring specialist knowledge or large-scale training programs.

Procurement and Licensing Compliance

Procurement of Generative Artificial Intelligence (GenAI) systems at TIIS must follow the standard procurement processes, ensuring value for money, transparency, and accountability.

All approved deployments must:

- Comply with licensing, intellectual property, and copyright law.
- Be checked by TIIS Management for alignment with institutional requirements, including privacy and data use obligations.
- Proceed only where contracts and compliance obligations are clearly documented and fully met.

The use of unauthorised or unlicensed GenAI technologies is not permitted. Any uncertainties regarding contracts or licensing should be escalated to TIIS Management, the Academic Board (AB), or the Board of Directors (BoD) for decision.

Staff and Faculty Responsibilities

Staff and faculty at TIIS play a central role in fostering responsible GenAI use and guiding students in ethical application. Through ongoing professional development and active participation in ethical AI communities, staff and faculty are expected to continuously refine an understanding of GenAI strengths and limitations. Furthermore, staff are expected to apply professional judgment and seek guidance from TIIS Management, the Academic Board (AB), or the Board of Directors (BoD) where necessary.

Staff and faculty should:

- Complete training in ethical and responsible AI use.
- Provide clear guidelines in course outlines about permitted or prohibited AI use.
- Use only approved GenAI tools for teaching, research, and administrative purposes.
- Ensure no confidential or sensitive data is input into unapproved platforms.
- Retain full accountability for all AI-assisted outputs.
- Access support from TIIS Management, AB, or BoD for complex or ambiguous cases.

Participate in periodic professional development opportunities offered by TIIS to support AI-inclusive curriculum design and assessment.

Student Use of GenAI - Framework and Requirements

Students may use Generative Artificial Intelligence (GenAI) tools for learning and academic development only where this is explicitly permitted in their course outline or by their lecturer.

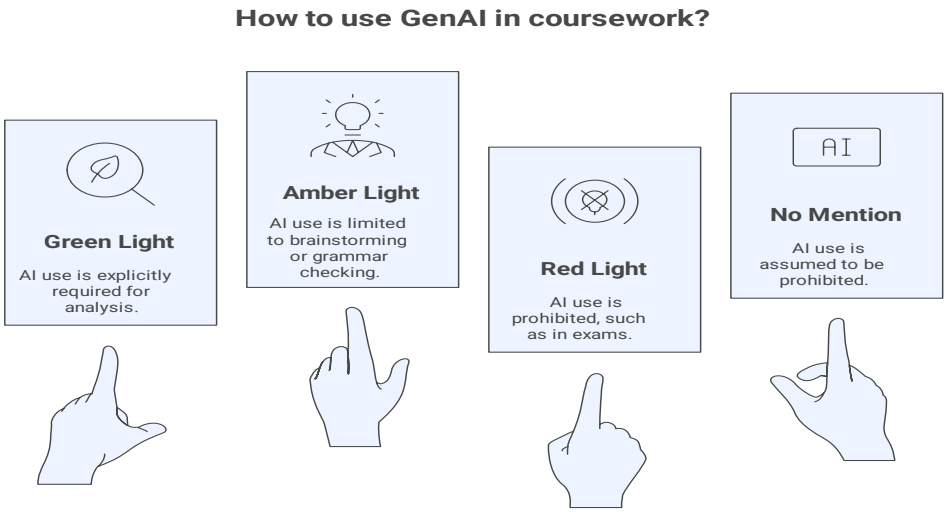

Improper use, such as outsourcing original thinking, breaching academic integrity, or submitting AI-generated work as one's own, is strictly prohibited and will be treated as misconduct under TIIS academic integrity procedures.

Students are expected to:

- Follow the guidance provided in each subject outline on whether and how GenAI may be used.
- Disclose GenAI use in assessments using the TIIS disclosure template where required.
- Demonstrate unaided work in at least one assessment task per subject, as specified by TIIS policy.
- Take personal responsibility for how GenAI is used, with any disputes or appeals considered by the Academic Board (AB).

TIIS uses a traffic-light framework (Figure 2) making clear when and how GenAI tools may be used in learning and assessment:

Figure 2

🔴 Red – Prohibited: GenAI use is not permitted (e.g., exams or other assessments requiring fully unaided performance).

🟡 Amber – Limited use: GenAI may be used for supporting tasks (e.g., grammar checking, brainstorming, structuring ideas), but not for producing final content.

🟢 Green – Required use: GenAI is expected as part of the task (e.g., using AI-assisted analysis or comparing outputs).

Disclosure

Students must disclose all GenAI use using the TIIS disclosure template (Appendix A).

Disclosures must specify the tool used, the purpose, and the scope of AI involvement.

Authenticity

Final work must always reflect the student's own thinking and skills.

Over-reliance on AI, or submitting AI-generated work as one's own, is misconduct under TIIS's academic integrity framework.

Assessment Design

Each subject must include at least one assessment task that does not allow AI use (e.g., exams, oral presentations, handwritten work).

Where GenAI is permitted or required, assessments may include tasks such as:

- Providing prompt logs.
- Writing reflection pieces on AI use.
- Comparing AI-generated outputs with student-created outputs.

Researchers and GenAI Use

Researchers at TIIS may use Generative Artificial Intelligence (GenAI) for idea generation, analysis, or writing support, provided that all use is transparent and responsible. Practices must remain consistent with the Australian Code for the Responsible Conduct of Research.

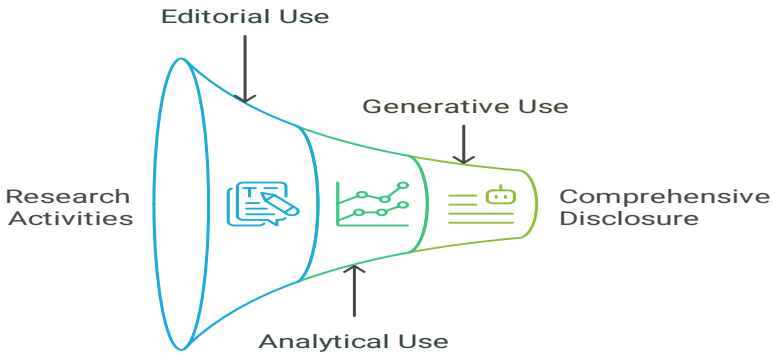

Prohibited Practices

- Generating or falsifying research data.
- Presenting AI outputs as original work without disclosure.
- Uploading confidential, sensitive, or participant data to unapproved platforms.

Disclosure Framework

Figure 3

Disclosure Levels in Research

Researchers follow a tiered disclosure framework:

- Editorial use (e.g., grammar, formatting) → disclose in acknowledgments.
- Analytical use (e.g., coding, data summaries) → disclose in methods.
- Generative use (e.g., drafting sections, creating images) → disclose in both methods and acknowledgments, citing tools as appropriate.

Synthetic Data

- May be used for simulation or training where access to real data is restricted.
- Must be clearly labelled, disclosed, and held to the same ethical standards as authentic data.

Oversight

- Researchers are personally responsible for ensuring compliance.
- Supervisors must provide oversight within their projects.
- Any concerns or breaches should be escalated to TIIS Management and, if necessary, the Academic Board (AB).

Compliance and Integrity:

- Researchers must take personal responsibility for verifying the accuracy, reliability, and reproducibility of any outputs generated with GenAI.
- Supervisors and Principal Investigators (PIs) are accountable for ensuring that GenAI is used responsibly within their projects, and that team members understand disclosure and ethical requirements.
- Any suspected breaches of this policy will be considered under TIIS Research Misconduct Procedures, with escalation to TIIS Management and, if required, the Academic Board (AB)

Compliance and Breaches

All members of the TIIS community are expected to comply with this policy. Non-compliance may result in disciplinary action under the relevant academic or workplace frameworks.

Enforcement includes:

- Education and awareness: TIIS will provide practical guidance and resources to help staff and students use GenAI responsibly.
- Clear reporting channels: Suspected misuse should be reported to TIIS Management, with escalation to the Academic Board (AB) or Board of Directors (BoD) where required.
- Consistent consequences: Breaches will be addressed through TIIS's existing academic integrity or workplace misconduct procedures.
- Appeals process: Students and staff may appeal AI-related findings through established TIIS procedures, overseen by the AB.

TIIS will take a proportionate approach to monitoring the AI systems it adopts in teaching, research, and administration. Monitoring will focus on identifying risks of bias or unfair outcomes. Where systemic risks are identified, TIIS may respond through policy updates, additional training, or adjustments to practice.

Oversight of compliance and breaches rests with TIIS Management, with reports made to the Academic Board and, where necessary, the Board of Directors.

Education, Support, and Continuous Review

This policy will be reviewed quarterly, or as needed, by TIIS Management, with input from the Academic Board (AB) and, where appropriate, the Board of Directors (BoD). Reviews may take account of new technologies, regulatory changes, and feedback from the TIIS community.

To build AI literacy and practical support across the institution, TIIS will:

- Provide a short AI orientation module for students as part of induction.
- Offer occasional workshops or briefings for staff on AI use in teaching, assessment, and administration.
- Maintain simple guides and templates for students, staff, and researchers to support responsible GenAI use.
- Ensure assessment rubrics include clear criteria for responsible AI use where relevant.

Alignment with the Higher Education Standards Framework (HESF) 2021

- Standard 5.2: Academic and Research Integrity
- Standard 5.3: Learning Resources and Educational Support
- Standard 3.1: Course Design
- Standard 6.2: Corporate Monitoring and Accountability
- Standard 7.2: Information for Prospective and Current Students
- Standard 4.2: Research

Definitions

Artificial Intelligence (AI): Systems performing tasks requiring human intelligence.

Algorithm: A finite set of instructions used to solve problems or automate decision-making.

AI Literacy: The ability to understand, evaluate, and engage critically with AI tools.

Prompt Engineering: Designing and refining inputs for GenAI to produce outputs.

Hallucination: When AI generates false or fabricated information.

Data Privacy: Protection and responsible handling of personal/sensitive information.

Disclosure: Transparent declaration of AI use in academic, research, or professional outputs.

Generative AI (GenAI): AI that creates new content (text, code, images, audio).

Misuse: Unethical, unauthorised, or inappropriate use of GenAI.

Synthetic Data: Artificially generated data used for training, testing, or simulation, clearly labelled and disclosed.

Tiered Disclosure: Framework for categorising AI use as editorial, analytical, or generative.

**********END OF POLICY and PROCEDURE*********

Appendices

Appendix A: Student Disclosure Template

Appendix B: Student Decision Framework

Appendix C: Ethical/Privacy Checklist

Appendix D: Researcher Tiered Disclosure Framework

Appendix E–H: Quick Reference Guides (Students, Staff and Faculty, Researchers, Administrators)

Appendix A: Student Disclosure Template

Within this template, the phrase *"The tool contributed by [describe contribution]"* is a fill-in-the-blank instruction telling students to describe, in their own words, what the AI did for them. For example, the tool contributed by

Suggesting alternative sentence structures to improve grammar and clarity.

Summarising background literature, which I checked and rewrote in my own words.

Generating draft code snippets, which I modified and annotated.

AI Disclosure Statement

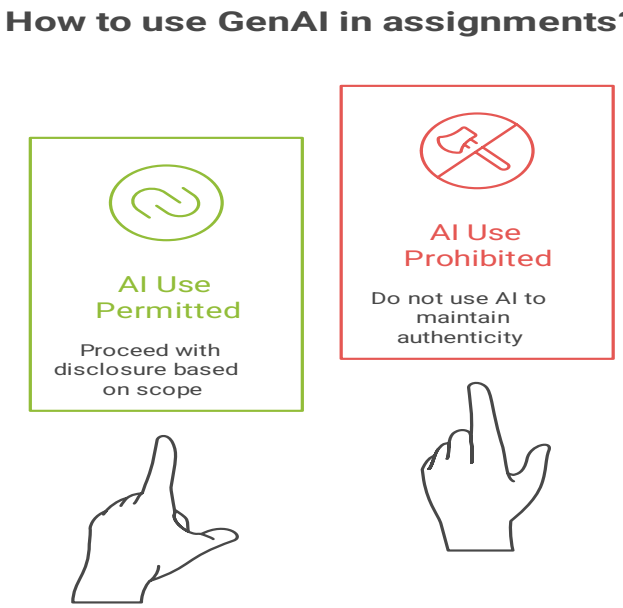

I [insert students name] declare that I used [GenAI Tool Name] for the following purpose(s): [idea generation, drafting, editing, coding assistance].

The tool contributed by [describe contribution]. All analysis, argument, and conclusions are my own.

Student's Signature _____ Date _____

Appendix B: Student Decision Framework for GenAI Use

Figure 4

Step 1: Check the course outline and assessment instructions.

- If AI use is explicitly permitted → proceed with disclosure.
- If not mentioned → assume use is prohibited.

Step 2: If permitted, determine the scope.

- Idea generation or editing support → disclose in submission.
- Content generation or coding assistance → disclose with more detail.

Step 3: Use the student disclosure template (Appendix A) to declare AI involvement.

Step 4: Ensure authenticity.

- Final work must reflect your own thinking and skills.

Step 5: Submit.

- Include the disclosure statement within your assignment.

Appendix C: Gen AI Tool Ethical and Privacy Checklist (for staff and administrators) & Template

This checklist must be completed by staff or administrators before deploying any Generative AI (GenAI) tool at TIIS. It summarises the required ethical and privacy checks and must be attached to the full EIA/PIA form. Final approval rests with TIIS Management, Academic Board (AB), or Board of Directors (BoD) as appropriate.

Checklist

☐ Has an Ethical Impact Assessment (EIA) been completed?

☐ Has a Privacy Impact Assessment (PIA) been completed?

☐ Who approved the deployment (TIIS Management, AB, BoD)?

☐ Are licensing and copyright obligations met?

☐ Is data governance compliant with TIIS standards and legislation?

Approval Sign-off

Name of AI Tool/Project: _____

Department/Requester: _____

Reviewed by (Name/Position): _____

Date: _____

Final Decision: ☐ Approved ☐ Approved with Conditions ☐ Not Approved

Conditions (if any): _____

Signature: _____

This template must be completed for any Generative AI (GenAI) tool prior to deployment at TIIS. Designed for non-experts and provides guiding questions. Once completed, attach with the Ethical & Privacy Checklist and submit for approval to TIIS Management, Academic Board (AB), or Board of Directors (BoD).

Section 1 – Project/Tool Details

- Name of AI Tool/Platform: _____
- Purpose of Use (what problem does this solve?): _____
- Owner/Requester (who is responsible?): _____

Section 2 – Ethical Impact Assessment (EIA)

Guiding questions:

- Intended Use: Why is this tool being used? Is it appropriate in an educational setting?
- Risks of Bias/Fairness: Could the tool disadvantage some students/staff or give inaccurate results?
- Transparency: How will users know AI is being used (e.g., disclaimers, course outlines)?
- Human Oversight: Who checks the outputs? What happens if something goes wrong?
- Mitigation Strategies: How will risks be reduced (testing, disclaimers, escalation)?

Section 3 – Privacy Impact Assessment (PIA)

Guiding questions:

- Data Input: What type of data will be entered (student work, admin records, none)?
- Sensitive Data: Does the tool use confidential or personal data (e.g., student details)?
- Storage/Processing: Where is the data stored (TIIS servers, external provider)?
- Data Protection: How will data be protected (contracts, encryption, restricted access)?
- Mitigation Strategies: How will privacy risks be reduced (anonymisation, deletion schedule)?

Section 4 – Deployment Approval

- Reviewed by: ☐ TIIS Management ☐ Academic Board (AB) ☐ Board of Directors (BoD)
- Decision: ☐ Approved ☐ Approved with Conditions ☐ Not Approved
- Conditions: _____
- Date of Approval: _____
- Name & Position of Approver: _____

Section 5 – Ongoing Monitoring

Guiding questions:

- How often will the tool be reviewed (annually, each semester)?
- Who will monitor performance and risks?
- How will incidents be reported (to TIIS Management, AB, or BoD)?

Example – AI Writing Assistant (Teaching Support)

Section 1 – Project Details

Tool: Licensed Writing Assistant Tool

Purpose: Help students with grammar and academic writing style.

Owner: Teaching & Learning Committee

Section 2 – EIA

Intended Use: Support, not replace student writing.

Bias/Fairness Risks: Risk of over-reliance, loss of critical thinking.

Transparency: Use disclosed in assignments.

Oversight: Lecturers review submissions for authenticity.

Mitigation: Require one AI-free task per subject.

Section 3 – PIA

Data Input: Student drafts.

Sensitive Data: Restricted; no confidential info permitted.

Storage: Licensed provider servers; no training reuse allowed.

Protection: Contractual safeguards, privacy terms.

Section 4 – Deployment Approval

Reviewed by: Academic Board

Decision: Approved with conditions

Date: 5 April 2025

Approver: Dr Alan Brown, Chair AB

Section 5 – Ongoing Monitoring

Annual review by AB.

Misuse handled via academic integrity processes.

Example – AI Research Summariser (Research Tool)

Section 1 – Project Details

Tool: Research Summariser Pro

Purpose: Provide quick summaries of academic papers.

Owner: Research Office

Section 2 – EIA

Intended Use: Speed up literature review.

Bias/Fairness Risks: Misinterpretation or plagiarism risk.

Transparency: Researchers disclose use in methods.

Oversight: Researchers verify accuracy.

Mitigation: Treat as drafts only.

Section 3 – PIA

Data Input: Abstracts or full papers (licensed access).

Sensitive Data: None.

Storage: Provider servers under copyright restrictions.

Protection: Contracts enforce proper use.

Section 4 – Deployment Approval

Reviewed by: Academic Board

Decision: Approved

Date: 8 May 2025

Approver: Prof Sarah Lee, Research Dean

Section 5 – Ongoing Monitoring

Annual review by AB.

Misuse handled under Research Misconduct Procedures.

Appendix D: Researcher Tiered Disclosure Framework

Researchers must disclose AI use in line with the following categories:

1. Editorial Use with AI used for grammar checking, language refinement, or formatting support. Disclosure may be included in acknowledgments.
2. Analytical Use with AI used for coding assistance, data summarisation, or exploratory analysis. Disclosure should appear in the methods section, specifying tool(s) and scope.
3. Generative Use with AI used for drafting substantial sections of text, generating images, or creating novel content. Disclosure must be detailed in the methods and acknowledgments, and AI outputs should be cited appropriately.

This tiered framework ensures proportional transparency while preserving research integrity and accountability.

Appendix E: Student Quick Reference Guide

Responsibilities

- Use GenAI only if explicitly permitted in course outlines or assessment instructions.
- Disclose all AI use with the standard disclosure template.
- Ensure final work reflects your own thinking and analysis.
- Do not outsource critical thinking or misrepresent AI-generated material as your own.

Figure 5

GenAI Use: Acceptable vs. Misuse

Task	Writing	Idea Generation	Research & Analysis	Academic Integrity
Acceptable Use	Grammar checking	Brainstorming ideas	Summarising reading list	Disclosure with template
Misuse	Submitting AI-written essays	Fabricating references	Critical engagement missing	Outsourcing critical thinking

Examples of Acceptable Use

- Brainstorming ideas with ChatGPT.
- Grammar checking with Grammarly AI.
- Summarising a reading list to plan research.

Examples of Misuse

- Submitting AI-written essays without disclosure.
- Using AI to fabricate references or data.
- Relying on AI outputs without critical engagement.

Disclosure Statement

I [Insert Student's Name] declare that I used [GenAI Tool] for [purpose, e.g., idea generation, editing]. The final analysis and conclusions are my own.

Student's Signature _____ Date _____

Appendix F: Staff & Faculty Quick Reference Guide

Responsibilities

- Provide clear instructions in course outlines on permitted AI use.
- Complete minimum training requirements for ethical AI use.
- Use AI responsibly for lesson planning, feedback, or admin tasks — but retain oversight.
- Model transparency and integrity in AI use to guide students.

Examples of Acceptable Use

- Drafting lesson outlines with GenAI, then refining.
- Using AI to generate multiple-choice questions (checked for accuracy).
- Summarising student feedback trends with AI analytics.

Examples of Misuse

- Uploading student data into unapproved AI platforms.
- Allowing AI to grade work without human review.
- Using AI to write feedback without verification.

Disclosure Example (in teaching material)

This lecture outline was prepared with support from [AI Tool] to structure key themes. Content and interpretation are my own.

Appendix G: Researcher Quick Reference Guide

Responsibilities

- Apply the tiered disclosure framework (Appendix D) for editorial, analytical, and generative uses.
- Verify accuracy and reproducibility of any AI outputs.
- Do not upload confidential or participant data into AI platforms.
- Ensure compliance with the Australian Code for the Responsible Conduct of Research.

Figure 6

Examples of Acceptable Use

- Editorial: using AI for grammar and formatting checks.
- Analytical: using AI to generate Python scripts for data cleaning.
- Generative: using AI to draft a literature summary (with disclosure).

Examples of Misuse

- Fabricating data or findings with AI.
- Submitting AI-drafted sections without attribution.
- Failing to differentiate synthetic from real data.

Disclosure Example

- Methods: AI assistance (ChatGPT) was used to code preliminary interview transcripts.
- Acknowledgments: Grammarly AI was used to refine grammar.
- References: Sections of text were generated with GPT-4, reviewed, and edited by the authors.

Appendix H: Administrator Quick Reference Guide

Responsibilities

- Ensure all GenAI tools used in administration undergo Ethical /Privacy Impact Assessments (Appendix C).
- Verify procurement complies with licensing and copyright obligations.
- Maintain accountability through data governance frameworks.
- Promote AI literacy across departments.

Examples of Acceptable Use

- Automating routine student service queries with a chatbot.
- Using AI to draft policy documents (with human review).
- Analysing operational workflows for efficiency improvements.

Examples of Misuse

- Implementing AI systems without risk or privacy assessment.
- Uploading staff or student records into unapproved AI platforms.
- Allowing AI to make student service decisions without human oversight.

Checklist

- Has an EIA/PIA been completed?
- Has approval been obtained from IT, Ethics, and Data Governance?
- Is data use compliant with TIIS standards?
